

# Aerobatic Maintenance Specialists

If you desire the highest quality maintenance for your aircraft, look no further than the professionals at EFA.

Our maintenance personnel are quite simply some of the best in the business. At EFA, we maintain all of our aircraft to the highest standards. Many shops claim to have excellent maintenance capabilities, but at EFA, our mechanics maintain a fleet of 35 aircraft, which fly an incredible 14,000 hours per year.

Our technicians also have a long history of working on the airframes and engines of exotic aerobatic aircraft such as EXTRA, CAP, Pitts, American Champion, EDGE, and others. At our EXTRA and Cessna Authorized Service Centers, these dedicated professionals will maintain your new or pre-owned aircraft to the highest standards.

Under the supervision of Matthew Goulian (A&P, IA), EFA has developed a world class reputation for high performance aerobatic service. With a team of specialized aerobatic technicians, EFA should be your choice for overseeing the maintenance program for your aerobatic or sport aircraft.

For more information, please call Matthew Goulian directly at 781-274-7477.

We are very pleased to announce that we will be opening our new, 12,000 sq ft. maintenance facility at the Lawrence Municipal Airport (KLWM) in August 2008.
